BE TAG : BE TAG (HEADER, TRAILER)

BA SIZE : BUFFER ALLOCATION SIZE

AL : ALIGNMENT

LENGTH : LENGTH DISPLAY

FIG. 5

SN : SEQUENCE NO. SN ADDITION METHOD : FREE-RUN METHOD AT EACH AAL CONNECTION
 LI : EFFECTIVE INFORMATION LENGTH IN PAYLOAD P : PRIORITY FIELD
 CRC: CYCLIC CODE $G(X) = 1 + X + X^2 + X^5 + X^9 + X^{10}$ MID : MULTIPLEX IDENTIFIER
 ST : SEGMENT TYPE (CELL-DIVIDING IDENTIFIER)

FIG. 6A**FIG. 6B**

VPI : VIRTUAL PATH IDENTIFIER

VCI : VIRTUAL CANNEL IDENTIFIER

PT : PAYLOAD TYPE

00 : USER DATA

01 : TEST DATA

CLP : CELL LOSS PRIORITY

0 : LOW PRIORITY (VOICE)

1 : HIGH PRIORITY (FAX, HDLC)

RCC : ROW OF CELL COUNT

(INDICATES WHOLE-NUMBER MULTIPLE
OF SIX OCTETS OF HEADER)

HEC : HEADER CHECK SEQUENCE

GENERATED POLYNOMIAL $= X^9 + X^2 + X + 1$

The diagram illustrates a high-speed terminal interface system for an extended ATM unit. The system is composed of several interconnected components:

- Monitor/Controller (93):** Connected to the SOH and POH terminating equipment.
- SOH Terminating Equipment (82):** Connected to the POH terminating equipment and the selector (92).
- POH Terminating Equipment (83):** Connected to the SOH terminating equipment and the selector (92).
- Selector (92):** A dashed box containing three sub-selectors (92_1, 92_2, 92_3) that route signals to the converters and multiplexers.
- Multiplexer (84):** Receives signals from the selector and outputs to the demultiplexer.
- Demultiplexer (85):** Receives signals from the multiplexer and outputs to the converters.
- Converters (86, 87):** Convert TUG-2 to VC-3 and VC-3 to TUG-2, respectively.
- Cross-Connect Unit (89):** Receives signals from the converters and outputs to the TU terminating equipment.
- TU Terminating Equipment (88):** Receives signals from the cross-connect unit and outputs to the multiplexer.
- Filters (90_1, 90_2, 90_3):** 6MIF, 2MIF, and 1.5MIF filters connected to the cross-connect unit.
- Optical Fiber Cables (81_1, 81_2):** Connect the system to external optical networks.
- High-Speed Terminal Interface (91):** The output of the system, which can be a terminal or an extended ATM unit.
